

Patient: Doe, John N	Exam Date: 5/4/2016 7:55:16 AM
MRN: 10181962	DOB: 11/18/1960
Ref. Clinician: Demo Physician MD	Gender: M
Fax: (417)123-4567	Phone: (417)789-4561
Facility: Demo Facility	

PROCEDURE: SHOULDER^RIGHT
IMAGE SEQUENCES: PD TSE FS TRA, T1 TIRM COR, PD TSE COR, T1 TIRM SAG, T1 TSE SAG
HIGH FIELD MAGNET

HISTORY: Patient presents with right shoulder pain after an accident while driving his work truck. Patient complains of pain and decreased range of motion. No cancer. No surgery.

TECHNIQUE: Multiplanar multi-sequence MR imaging of the right shoulder was performed without gadolinium. No comparison study available.

FINDINGS:

Rotator cuff: There is a tiny 3 mm right tear of the undersurface of the supraspinatus tendon insertion. Otherwise, there is good coverage of the humeral head by the rotator cuff tendons. I don't see any full or partial-thickness tear of the rotator cuff. Mild increased signal is seen in the supraspinatus tendon consistent with tendinopathy. No muscle atrophy is seen.

Acromioclavicular joint: There is moderate degenerative hypertrophy of the acromioclavicular joint. There is a curved type 2 acromion present. No significant subacromial joint effusion is seen.

Glenohumeral joint: The humeral head is neutrally located in the glenoid fossa. No significant glenohumeral joint effusion is seen. No significant osteophyte formation is seen at the glenohumeral joint. The non-arthrographic evaluation of the labrum shows no definite labral tear or paralabral cyst.

Osseous and other: Normal marrow signal is seen throughout the visualized osseous structures. I don't see any acute fracture or dislocation. There is no Hill-Sachs deformity or bony Bankart lesions seen. The biceps tendon is normally located in the bicipital groove.

IMPRESSION:

1. Tiny rim rent tear is seen in the supraspinatus tendon insertion, no other focal partial-thickness tear is seen. There is mild tendinopathy of the supraspinatus tendon seen.
2. The non-arthrographic evaluation of the right shoulder shows no definite labral tear or paralabral cyst.

INTERPRETING COMPANY: Emergence Teleradiology, Joint Commission Accredited

INTERPRETING DOCTOR: Demo Physician MD

ELECTRONICALLY SIGNED: Signed by Demo Physician MD at 5/4/2016 8:37:35 AM
